Motor Insurance Quote Form

Time limit: 5 hours | AI tools permitted | Live defence follows

1. What We Do

We run a motor insurance comparison platform. Users visit, fill a form, get quotes from multiple insurers, and buy a policy. The form is the most important surface in our product — it is where most users either convert or leave.

Our current form is long, slow, and losing users. On mobile, average time-to-quote is over four minutes. We do not know exactly where users drop off because we have not instrumented it properly. We also have reason to believe not all form submissions are genuine.

2. What We Want You to Build

Rebuild the quote capture form. The output must be a working implementation in the browser — not a design, not a wireframe.

One rule: ask the user only what you need, when you need it. A user should be able to see a quote range as fast as possible.

Below are the 18 fields our current form collects. They are in no particular order. Your job is to decide which ones are needed to generate a quote, which ones can wait, and how to sequence what remains.

Field	Notes
full_name	Free text
mobile_number	10-digit Indian mobile number
email_address	Standard email format
date_of_birth	DD/MM/YYYY
vehicle_registration_number	Format: XX00XX0000 (e.g. DL09CA1234)
vehicle_make	e.g. Maruti, Hyundai, Tata
vehicle_model	e.g. Swift, Creta, Nexon
vehicle_variant	e.g. VXi, SX(O), XZ+
manufacture_year	Year of manufacture
fuel_type	Petrol / Diesel / CNG / EV
city_of_registration	City where the vehicle is registered with RTO
previous_insurer_name	Name of the user's current or most recent insurer
previous_policy_expiry_date	DD/MM/YYYY
ncb_percentage	No Claim Bonus: 0%, 20%, 25%, 35%, 45%, 50%

claims_in_last_3_years	Number of claims filed: 0 / 1 / 2 / 3+
idv_preference	Insured Declared Value preference: Low / Market / High
nominee_name	Full name of the policy nominee
nominee_relationship	Nominee's relationship to the policyholder

3. A Problem We Have Not Solved

We have a submission quality problem. Our data shows that a meaningful percentage of leads that come through the form are rejected by insurance carriers — meaning the carrier will not pay us for them.

We have not built anything to address this. We are not telling you what to build — that is part of what we want to see from you. Your solution should not add visible friction for genuine users. A real person filling out a quote form should have no idea anything is running in the background.

4. What to Submit

- Working form — runnable in a browser, no setup beyond opening a file or running one command
- A short document — no more than one page — covering: which fields you moved or removed and why; how you structured the steps; the top 3 assumptions you made; and what you would do differently with more time.

— End of Brief —
